## Indiana's Tobacco Burden

Tobacco use is the leading preventable cause of premature death and disease in the United States, causing more deaths annually than alcohol, HIV, car accidents, illegal drugs, and firearm-related incidents combined. The impact of tobacco in Indiana is staggering, costing Hoosiers 11,100 lives each year. This fact sheet presents data illustrating the burden tobacco use places on all Hoosiers.

### **Indiana Adult Smoking Prevalence**<sup>4</sup>

- In 2019, nearly 1 in 5 Indiana adults (19.2%) were current smokers. This is a significant decline from 25.6% in 2011.
- Some groups within Indiana remain disparately affected by smoking. In particular, smoking prevalence in 2019 was higher among adults with lower education, lower income, those uninsured, and those with poorer mental health status.
- Between 2011 and 2019, Indiana's adult smoking prevalence was consistently higher than the United States median smoking prevalence.

#### **Smoking among Pregnant Women**

Smoking during pregnancy increases the risk of several poor health outcomes for both mothers and babies, including low birth weight, premature birth, pregnancy complications, and sudden infant death syndrome (SIDS).<sup>5</sup>

- In 2019, Indiana's smoking during pregnancy rate was 11.8%.6
- Although smoking rates among pregnant women in Indiana have declined in recent years, Indiana still has a rate of smoking during pregnancy nearly twice the United States rate (6.5%).<sup>7\*</sup>
- Smoking during pregnancy rates in Indiana counties range from 2.0% to 32.7%. Thirty-four of Indiana's 92 counties have a smoking during pregnancy rate that is significantly higher than the statewide rate.<sup>6</sup>

## **Quick Facts**

- Nearly 1 in 5 Indiana adults (19.2%) were current smokers in 2019.<sup>4</sup>
- In 2019, 11.8% of pregnant women in Indiana smoked during pregnancy.<sup>6</sup>
- In 2018, 1.9% of middle school students and 5.2% of high school students in Indiana smoked cigarettes in the past 30 days.8
- An estimated 2,600 Indiana youth become new daily smokers each year.<sup>9</sup>
- Smoking takes the lives of 11,100 Hoosiers annually.<sup>3</sup>
- Smoking costs Hoosiers an estimated \$2.93 billion in medical expenses each year.<sup>3</sup>
- Unless smoking rates are further reduced, an estimated 151,000 Indiana youth will ultimately die prematurely of smoking.<sup>1</sup>

<sup>\*</sup>Calculated from natality data from 48 states and the District of Columbia.

# Indiana's Tobacco Burden

### **Indiana Youth Smoking<sup>8</sup>**

Youth smoking prevalence in Indiana has declined substantially between 2000 and 2018.

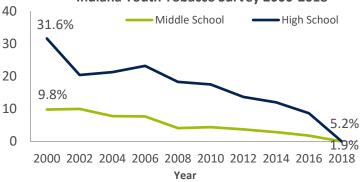

- Past 30-day smoking prevalence among middle school youth declined 81%, from 9.8% in 2000 to 1.9% in 2018.
- Past 30-day smoking prevalence among high school youth declined 84%, from 31.6% in 2000 to 5.2% in 2018.

Despite these declines, an estimated 2,600 Indiana youth under age 18 become new daily smokers each year. Unless smoking rates are further reduced, an estimated 151,000 Indiana children currently under age 18 will ultimately die prematurely from smoking.

#### **Indiana's Tobacco-related Policies**

- Indiana's current cigarette excise tax is 99.5 cents per pack. As
  of June, 2019 the average state cigarette tax was \$1.81 per
  pack, with taxes ranging from 17 cents to \$4.35 per pack.<sup>10</sup>
- All Hoosiers are protected by a statewide smoke-free air law that non-hospitality workplaces and restaurants. Only about 31% of Indiana residents, however, are protected by a strong local smoke-free air law that covers non-hospitality workplaces, restaurants, and bars.
